Character Generation

②

Which characters can I generate?

All AI anime models (Niji, NAI, Anything etc.) use Danbooru images for a lot of their training data, so Danbooru's tag counts are a a good way to check whether or not Niji can generate a character.

As (very rough) benchmarks for Niji V5, if a Danbooru tag has:

- **Over 10k images:** Perfect no matter what

- **Over 1k images:** Accurate, and even more accurate if you mention the series name as well

- **500-1k images:** Partially accurate, hit-or-miss depending on character

- **Less than 500 images:** Tough luck

These benchmarks aren't definitive: many characters are completely omitted from the training data regardless of their Danbooru popularity.

Niji V5 Prompts

Characters

EVA 01, asuka langley soryu looking into distance, eva, 1980 1990 anime retro nostalgia , --ar 16:9 --s 90 --style expressive --niji 5

Copy

EVA 00, rei ayanami looking into distance, fullbody, eva, 1980 1990 anime retro nostalgia , dynamic angle, wind, hyper, masterpiece, ultimate details, --ar 16:9 --s 90 --style expressive --niji 5
