Assignment 8

I believe that AI can be a useful tool in the coming future,I do believe their needs to be more regulation when it comes to having AI do people's homework,but it can be helpful and should be allowed to assist people in specifics aspects such as additional information, letter writing, job applications as well as using it as a tool to teach and further educate on specific ideologies.While I do think the future of AI technologies can be dangerous and can negatively impact the schooling system I believe that it shouldn't be banned or taken away because with the rapid rise of AI it will be a constant battle of trying to band or catch on to the newest technologies,so instead of trying to beat them schools should join them and teach students how to use AI to their benefit and not to their detriment.
